ABOUT THE STUDENT

S.NO	Description	Details
1.	Name of the student	**Abinav S**
2.	Register Number	**7376241CS501**
3.	Department	**Computer Science and Engineering**
4.	Year of study	**III**
5.	Contact Number	**6383389235**
6.	Mail id	**abinavs.cs23@bitsathy.ac.in**
7.	Location	**Salem, Tamilnadu**

Local Context – BPI Industry Visit (Basic Details)

Parameter	Details
Organization / Industry Name	**Vasanth and Co**
Location (City / Area)	**Sathyamangalam, Erode**
Date of Visit	**04/04/2026**
Time of Visit	**4:00 PM**
Department / Unit Visited	**Retail Showroom (Sales Unit – Consumer Electronics & Home Appliances)**
Industry Contact Persons	**Ravishanker V, Brand Advisor- Vasanth and Co**
Photographic Evidence	**GEOTAG**

Relevant SDG Aligned with Industry Operations: Responsible Consumption and Production

DAY 1 ORIENTATION, OVERVIEW & THE BIG PICTURE

BPI – SECTION 1 BUSINESS OVERVIEW & END-TO-END FLOW

1.1 Core Purpose

Product/Service	Category	Variants	Problem Solved	Customer Impact
Consumer Electronics	Retail Product	Smart TVs, Laptops, Smartphones	Lack of access to reliable and updated technology	Enhances connectivity, productivity, and digital experience
Home Appliances	Retail Product	Split AC, Refrigerator, Washing Machine	Reduces manual effort in household tasks	Saves time, improves comfort and efficiency
Sales & Finance	Financial Service	EMI options, exchange offers	High upfront cost for customers	Makes products affordable and increases purchasing power
Installation & Support	After-Sales Service	Installation, maintenance, customer support	Lack of technical setup knowledge	Ensures smooth usage and improves customer satisfaction

Category: ☐ Retail ☐ Service

Additional Remarks: The company focuses on offering quality electronic products along with reliable support services to improve customer convenience and satisfaction

1.2 Revenue Model

Revenue Source	Description	Pricing Method	Frequency	% Contribution
Product Sales	Sale of electronics and home appliances such as TV, AC, refrigerator, and washing machine	Fixed price (MRP with discounts)	One-time	High
Financial Services	EMI options and exchange offers provided to customers	Interest-based / Partner-based pricing	Per transaction	Medium
Accessories Sales	Sale of additional items like cables, stabilizers, and stands	Fixed pricing	Project-based	Low to Medium
Installation & Support	Product installation and basic service support	Included / Service charge	Per service	Low

Main Revenue Driver: Product sales of electronics and home appliances

1.3 Customer Profile

Segment	Characteristics	Needs	Source Channel
Middle-income families	Price-sensitive, value-focused buyers	Affordable products, EMI options	Walk-in store, referrals
Working professionals	Time-conscious, brand-aware	Quick purchase, reliable products	Walk-in, online research
Students / Young customers	Budget-limited, tech-oriented	Latest gadgets at low cost	Social media, referrals
Rural / Semi-urban customers	Limited product awareness, need guidance	Product explanation, trust, after-sales support	Walk-in, word of mouth
Existing customers	Loyal, repeat buyers	Good service, offers, support	Referrals, direct contact

Customer Type: ☐ B2C

1.4 Department Map

Department	Role	Depends On	Outputs To
Sales Team	Handles customer inquiries, explains products, and closes sales	Customer requirements, product availability	Billing Department
Billing / Finance	Generates bill, handles payment and EMI processing	Sales details, customer information	Delivery Team

Inventory / Store	Manages stock, checks product availability	Supplier stock, warehouse updates	Sales Team
Delivery Team	Delivers products to customer location	Billing confirmation, product availability	Installation Team
Installation & Support	Installs product and provides after-sales support	Delivered products, customer request	Customer

Draw Flow Diagram Below: Customer → Sales Team → Billing → Delivery → Installation & Support → Customer

Additional Remarks: All departments are interconnected to ensure smooth product flow from sales to delivery and installation. Effective coordination between teams helps reduce delays and improve customer satisfaction.

1.5 Single Unit Trace

Step No	Department	Activity	Input	Output	Time Taken	Waiting Time
1.	Sales	Customer inquiry	Customer need	Product options	10 min	5 min
2.	Sales	Product selection	Options	Final product	10 min	5 min
3.	Billing	Bill generation	Customer details	Invoice	10 min	10 min
4.	Store	Stock check	Invoice	Product ready	10 min	15 min

5.	Delivery	Delivery scheduling	Address	Delivery plan	5 min	1–2 hrs

1.6 Time at Each Step

Covered in above table

Additional Remarks: *Time varies across steps, with major delays occurring during billing, product availability check, and delivery scheduling. Waiting time is mainly due to customer queue, stock verification, and coordination between departments.*

1.7 Biggest Risk Point

Identify the most critical risk in the process: Delay in product availability and delivery

Reason: Dependency on stock availability and lack of real-time coordination between inventory and delivery teams

Additional Remarks: *The process is generally smooth, but delays in stock availability and delivery scheduling can affect customer satisfaction and lead to order cancellations.*

1.8 Most Critical Task

Identify the most important task affecting success:Accurate product selection and order processing

Reason: Errors in product selection or billing can lead to wrong delivery, customer dissatisfaction, and return handling

Additional Remarks: Ensuring correct product details and smooth coordination between sales, billing, and delivery is crucial for maintaining service quality and avoiding delays.

BPI – SECTION 2 (ROUTINE TASKS & DEPENDENCIES)

2.1 Daily Tasks

Task	Time of Day	System/Memory	Owner	Output	Risk if Missed	Backup Available (Y/N)
Customer handling & sales	Full day	Manual + Experience	Sales staff	Product selection	Lost customer	No
Billing & payment processing	Full day	Software system	Billing staff	Invoice generated	Delay, customer dissatisfaction	Yes
Stock checking & updating	Evening	Manual	Store manager	Updated inventory	Stock mismatch, wrong info	No
Delivery scheduling	Afternoon	Phone	Delivery staff	Delivery plan	Delay in delivery	No
Product delivery	Full day	Manual coordination	Delivery team	Delivered product	Customer complaints	Yes

2.2 Weekly / Monthly Tasks

Task	Frequency	System/Memory	Owner	Output	Risk if Missed	Backup Available (Y/N)
Inventory checking	Weekly	Manual	Store staff	Updated stock	Stock mismatch, wrong availability	No
Sales performance review	Weekly	Excel	Manager	Sales insights	Poor decision making	Yes
Financial reporting	Monthly	Software	Manager	Financial data	Delay in planning	Yes
Stock replenishment	Weekly	Manual coordination	Manager	New stock arrival	Out-of-stock issues	No
Customer follow-up review	Weekly	Manual	Sales staff	Customer updates	Lost sales opportunities	No

2.3 System vs Memory Mapping

Task	Is Documented (Y/N)	Where Stored	Access Level	Error Risk
Customer handling / sales	No	Staff memory	Low	High
Billing & invoice	Yes	Billing software	High	Low
Inventory tracking	Partial	System	Medium	Medium
Delivery scheduling	No	Phone	Low	High

2.4 Task Ownership

Task	Primary Owner	Secondary Owner	Approval Required (Y/N)	Escalation Path
Customer inquiry handling	Sales Executive	Senior Sales Staff	No	Sales Manager
Billing & payment	Billing Staff	Manager	Yes	Branch Manager
Inventory management	Store Staff	Store Manager	Yes	Manager
Delivery scheduling	Delivery Staff	Sales Staff	No	Manager

Installation & support	Service Technician	Service Team	No	Service Manager

2.5 Impact if Task is Missed

Task	Immediate Impact	Downstream Impact	Customer Impact	Recovery Time
Customer inquiry handling	Customer not attended	Lost sales opportunity	Customer leaves shop	Immediate
Billing & payment	Delay in billing	Delay in delivery process	Customer dissatisfaction	30–60 min
Inventory update	Wrong stock information	Order delay	Customer frustration	Few hours
Delivery scheduling	Delivery not planned	Delay in installation	Customer complaints	1 day
Installation service	Product not usable	Service delay	Poor customer experience	1–2 days

Additional Remarks: Missing critical tasks such as billing, inventory updates, and delivery scheduling can lead to delays, customer dissatisfaction, and potential loss of sales. Proper coordination and system-based tracking are required to minimize these impacts.

2.6 Dependency Risk (Key Person Absence)

Task	Key Person	Can Others Perform (Y/N)	Time to Substitute	Risk Level (H/M/L)
Customer handling	Sales Executive	Yes	Low	Low

Billing & payment	Billing Staff	No	High	High
Inventory management	Store Staff	Yes	Medium	Medium
Delivery scheduling	Delivery Staff	No	Medium	High

Overall Dependency Level: ☐High

Additional Remarks: The business shows high dependency on key individuals, especially in billing, delivery, and service activities. In the absence of these key persons, operations may be delayed, leading to customer dissatisfaction and inefficiencies. Cross-training and system support can help reduce this risk.

2.7 Handover Readiness

Task	Handover Document Exists (Y/N)	Steps Clearly Defined (Y/N)	Training Required	Time to Handover
Sales	No	No	Medium	Medium
Billing & payment	Yes	Yes	Low	Low
Inventory management	Partial	No	Medium	Medium
Installation & support	No	No	High	High

Additional Remarks: Handover readiness is limited as most tasks lack proper documentation and clearly defined procedures. Many activities depend on staff experience rather than structured guidelines, making it difficult for new employees to take over efficiently. Implementing basic documentation and training can improve knowledge transfer and reduce dependency risks.

BPI – SECTION 3 (LEAD & ORDER CAPTURE SYSTEM)

3.1 Inquiry Channels

Channel	Type (Online/Offline)	Volume	Handled By	Recorded (Y/N)	Risk
Walk-in customers	Offline	High	Sales staff	No	High
Phone calls	Offline	High	Staff	No	High
Website	Online	Medium	Sales team	Yes	Medium
WhatsApp	Online	High	Sales staff	Partial	High
Social media	Online	Low	Marketing	Yes	Medium

Additional Remarks:*The business receives inquiries from multiple channels, with walk-in and phone inquiries being the most frequent. However, many offline and informal channels such as phone and WhatsApp are not properly recorded, leading to potential loss of customer data and missed sales opportunities.*

3.2 Recording System

Channel	Where Recorded	Format (Digital/Manual)	Accessible To	Error Risk
Phone	Excel	Manual	Sales Team	High
Walk-in visits	Register	Manual	Staff	High
Website	CRM	Digital	Sales Team	Low
WhatsApp	Chat	Manual	Sales Staff	High

Additional Remarks: The recording system is a mix of manual and digital methods. While online channels such as the website are recorded systematically, most offline and informal channels like phone calls, walk-in visits, and WhatsApp rely on manual recording or are not properly documented. This increases the risk of errors, data loss, and missed follow-ups.

3.3 Follow-up Process

Stage	Action	Responsible Person	Timeline	System Used	Miss Risk
Inquiry	Initial response (call / visit)	Sales Staff	Same day	Phone	Medium
Interested	Follow-up call / message	Sales Staff	1–2 days	Manual	High
Decision	Product explanation & negotiation	Sales Staff	2–3 days	Manual	Medium
Confirmation	Order confirmation & billing	Manager	Same day	Phone	Low
Post-sale	Follow-up for delivery & satisfaction	Sales Staff	2–5 days	Manual	High

Additional Remarks: *The follow-up process is mostly handled manually without a structured system. While initial responses are timely, follow-ups are inconsistent due to lack of tracking and reminders. This increases the risk of missed opportunities and lost sales.*

3.4 Lead/Order Tracking

Lead ID	Current Stage	Tracking Method	Updated (Y/N)	Visibility	Delay Risk
L001	Inquiry	Excel	No	Low	High
L002	Follow-up	Manual	No	Low	High
L003	Interested	Phone	No	Low	High
L004	Confirmed	Excel	Yes	Medium	Medium

Additional Remarks: *Lead tracking is mostly manual and not updated regularly, resulting in low visibility and high risk of missed follow-ups.*

3.5 Lost Lead Evidence

Has any lead/customer inquiry been missed?

☐Yes ☐No

If Yes, fill below:

Case	Channel	Reason Missed	Detected How	Impact
1.	Phone	Missed call	Later follow-up	Lost customer
2.	Website	No response	Email check	Delay in conversion

3.	Walk-in	Not properly noted	Staff discussion	Missed opportunity

Additional Remarks: *Some leads are missed due to lack of proper tracking and delayed follow-up, resulting in lost customers and reduced sales*

3.6 Conversion Gap

Stage	Drop-off %	Reason	Improvement Opportunity
Inquiry → Follow-up	30%	No proper tracking	CRM system
Follow-up →Interest	25%	Delay in response	Faster follow-up
Order → Payment	15%	No reminders	Better negotiation

Additional Remarks: *There is a noticeable drop-off at each stage due to lack of tracking and delayed follow-ups.*

3.7 Ideal Lead & Order System

Describe ideal process flow: Customer Inquiry → Automatic Lead Capture → CRM Entry → Timely Follow-up → Order Confirmation → Billing & Payment → Delivery → Installation → Feedback Collection

Key improvements needed: Implementation of CRM system, automated follow-up reminders, and centralized data management.

Additional Remarks: *A structured system can reduce missed leads and improve sales efficiency.5*

BPI – SECTION 4 (STAKEHOLDER INTERACTIONS)

4.1 Owner – Biggest Risk

Owner Name	Role	Identified Risk	Why Critical	Impact Level
Branch Manager / Owner	Overall Head	High dependency on staff	Daily operations depend on staff handling sales and customers	High
Branch Manager / Owner	Business Head	Loss of leads due to no tracking	Many inquiries are not recorded or followed up properly	High
Branch Manager / Owner	Decision Maker	Lack of system/automation	Manual processes slow decision making and tracking	Medium

Additional Remarks: *The owner faces significant risks due to dependency on staff and lack of a proper tracking system. Inefficient lead management and manual processes can result in lost sales opportunities and reduced business growth.*

4.2 Owner – Pride vs Concern

Aspect	Pride Area	Concern Area	Reason
Product Quality	Branded and reliable products	Stock availability issues	Demand variation and manual inventory tracking
Customer Service	Good customer interaction and sales support	Inconsistent follow-up	No proper tracking system
Business Growth	Strong local market presence	Missed sales opportunities	Leads not recorded properly

Additional Remarks: *The owner is proud of product quality but concerned about missed leads and lack of tracking.*

4.3 Manager – Resource Constraint

Manager Name	Department	Resource Constraint	Impact	Frequency
Branch Manager	Operations	Limited staff during peak hours	Customer waiting time	Frequent
Sales Manager	Sales	No CRM / tracking system	Missed leads and follow-ups	Frequent
Inventory Manager	Inventory	Manual stock tracking	Stock mismatch / delays	Medium

Additional Remarks: *Lack of staff and proper systems leads to delays and missed sales.*

4.4 Manager – Operational Gap

Process	Gap Identified	Cause	Impact	Suggested Fix
Inventory	No proper tracking	Manual system	Stock shortage / mismatch	Inventory management software
Sales	No lead tracking	No CRM system	Missed customers / sales loss	CRM system implementation

Additional Remarks: *Operational gaps are mainly due to lack of automation and proper tracking systems.*

4.5 Frontline Worker – Shortcut Observation

Worker Role	Task	Shortcut Taken	Reason	Risk Level
Sales Staff	Customer inquiry handling	Not recording customer details	Busy during peak hours	High
Sales Staff	Follow-up calls	Delayed or skipped follow-up	No reminder system	High
Inventory Staff	Stock update	Skips proper entry	Manual process	Medium

Additional Remarks: *Shortcuts are mainly due to workload and lack of proper systems, leading to missed sales and errors.*

4.6 Worker – Frustration

Worker Role	Task	Frustration	Cause	Impact
Sales Staff	Customer handling	Repeated calls & confusion	No proper lead tracking	Missed sales / delay
Sales Staff	Follow-up	Hard to remember customers	No reminder system	Lost opportunities
Inventory Staff	Stock checking	Time-consuming process	Manual tracking	Lost opportunities

Additional Remarks:*Workers face frustration due to manual systems and lack of proper tracking tools.*

4.7 Unimplemented Ideas

Stakeholder	Idea	Why Not Implemented	Feasibility	Expected Impact
Manager	CRM system	Cost concerns	High	Better sales & tracking
Sales Team	Follow-up reminder system	No proper tool	High	Reduced missed leads
Owner	Inventory management system	Lack of time / awareness	High	Reduced missed leads

Additional Remarks:*Important ideas like CRM and inventory systems are not implemented due to cost and lack of awareness.*

4.8 Stakeholder Summary Insights

Common patterns observed across stakeholders: *High dependency on manual systems, lack of automation, poor lead tracking, and communication gaps between staff.*

Conflicts between stakeholders: *Sales vs Inventory (stock availability issues), Sales vs Management (missed leads and follow-up delays).*

Alignment opportunities: *Implement CRM system, improve communication, and automate lead and inventory tracking.*

Additional Remarks: *Better coordination and system implementation can improve efficiency and reduce missed opportunities.*

FINAL SUMMARY

Top 3 Improvements:

1.Implement CRM system for proper lead tracking and follow-up

2.Introduce inventory management system to avoid stock issues

3.Automate reminders & processes to reduce manual work

Conclusion:

The business currently relies on manual processes, leading to missed leads and inefficiencies. Implementing CRM and automation systems can improve tracking, increase sales, and enhance overall operational efficiency.
